AMENDMENT TO THE SPECIFICATION

Please amend the Abstract section on page 175 of the specification as follows:

The invention is directed towards routing method and apparatus. Some

embodiments-provide a \underline{A} routing method that uses diagonal routes. This method routes

several nets within a region of a circuit layout. Each net includes a set of pins in the

region. The method initially partitions the region into several sub-regions. For each

particular net in the region, the method then identifies a route that connects the sub-

regions that contains a pin from the set of pins of the particular net. Some of the identified

routes have edges that are at least partially diagonal.
